Thank you Darrel this trolling tool is AMAZING we used it all the time in 2013 on dipsy divers tru trip divers with Michigan Stinger spoons we could put are baits EXACTLY 2 FOOT above the walleye. All the charts out there are close but not that close we could adjust are depth in real time with current and speed the depth changes no chart can show you that SMART TROLL WILL! Thanks again for all your help. Looking forward 2 hooking them on again and staring @ my smart Phone LOL IF ANYONE has any ?

Jack Vanderpool (The Wiper Sniper Guide Service)

I am a hybrid striped bass guide on Truman Lake in Missouri. I use live bait most of the time but when bait is hard to get or they just aren't hitting the live bait I will troll artificial. I am used to putting the live bait at the exact depth where the fish are using the fish finder. Trolling has been a guessing game until I bought the Smart Troll. Now I can troll at the exact depth that the fish are feeding at, taking away the guess work. Easy to install, east to use. This device added a new dimension to my guide service. Try it and you won't be sorry.

Robert Claus (finfanatic charters)

I am a fishing guide and Charter Captain in the Green Bay Wisconsin area. I fish Walleye on Green Bay and Lake Winnebago and Salmon and Trout on Lake MI. The Great Lakes have so many changing currents and temperatures from day to day sometimes it becomes necessary to understand those changes on your fishing to become successful in all conditions. Smart Troll is such a versatile tool and way more than your typical depth/ temp probe. A great example is the ability to run more than on probe on a variety of presentations. This not only allows you to zero in on the right temp at the right depth but can help you see current and tem changes live as the happen. I use a probe on a Dipsy Diver in conjunction with one on a Down Rigger while Salmon fishing, this way I have a good feel for my speeds on the outside and inside of my set up along with being able to use the two sets to zero in on the right water temps! As I stated above I also fish for Walleye on Green Bay and we have some crazy currents out there that mess with water temps and your bait speeds. The versatility of Smart Troll allows me to run a probe on an extra rod on a bottom bouncer and get a feel for how the current and temps below are effecting my presentation and fish. That saves me countless hours of trolling dead water! This is a GREAT product and super versatility, it will change the way you fish if you are on the Great Lakes. Capt. FSNmachine

I really enjoy my smart troll. The install was easy and I am finding it very helpful in find the fish in the right temperature zones. Its also great to know how deep my copper and leadcore lines are really running. I was concerned that the probe might put drag on the lines but am impressed how small and light the probes really are. I have never had down temp before but have used other units on my friends boats. I am happy with the smart troll to not have to worry about peeling cable and bad connections at the downrigger cable. Had fun the first time I put a probe on a copper line. I was thumbing the line out slowly and checking for temp and depth data on my android phone when my line started to peel out. Not thinking I thumbed it harder to stop it and burn't my thumb on the copper. About then I saw the fish fly into the air out of the water behind the boat and spit the hook.

Ken Beimiller (Off The Hook Sport Fishing)

Review Details: These guys are on the right track. This product has allowed me to find my fishing zone faster during setup and stay in it longer as direction, currents and water temps change allowing me to convert additional fish. Having the ability to see my depths and temps on multiple apparatus is huge, The disparity in where I thought my rigs were running vs where they really are is unbelievable. This product is a game changer.

Randy Calus (Sure Strike Charters)

Smart Troll is an amazing product like no other. There's so much good information coming from the system, like how much blowback is there exactly on my downriggers, how deep are my dipsies when I let so much line out, are they in the right zone, how does that change if I change my speed? Stop guessing and get a Smart Troll. The system is very reliable. The probe battery life is VERY long. Easy to install - like a fishfinder. Darrell is always available to answer questions. I really like my Smart Troll, and can't wait to get my speed probes.

Mike Warm

"Make Mine Portable" Serious About Trolling: I Do It In A Canoe! I Asked, And They Delivered! My Wife And I Were On The Water Six Days And Caught Fish Every Day. It Was Very Hot, And Crucial That We Fished Just Off The Bottom, That's Where The Fish Were. I Needed To Be Shure That My Presentation Was Precise, Or Give Up A Lot Of Tackle, Thanks To Smart Troll I Didn't Lose Any Tackle, And Caught Fish. (Walleye For Dinner First Night!) Loved The Portability Of My Smart Troll And Newest Features. Thanks Again For A Great Fishing Tool And Your Dedication To My Request. No More Depth Charts, lowering A Thermometer In The Lake Or Wondering If My Lure Is In The Right Place.
